So that's two trophies for the two of you

Lubos OK1FGD

---

Greetings to the competitors,  
improved conditions today, thanks for the connections, Lubos for the evaluation  
and see you next time  
73 Miro OM3ZU

---

Thank you for contest and evaluation Radek OK1DEP

---

We're lucky. Conditions between a few geomagnetic storms are pretty good.  
Thank you for a nice contest and for the evaluation.  
73, Robert OK2PYA

---

Hi, Lubos,  
I'm sending the log. Thank you for the contest and evaluation.  
73! Jirka OK2NAJ

---

Hey, racers,

today my /Qs were noticeably weaker than the higher power stations, but fortunately they were readable in both legs.  
Thanks for the connections.

73, Milan OM2KI/Q

---

Hi Lubos and competitors, despite the high solar flux were good today  
condx. Thanks to Honza OK5MN for the breakthrough qso. Participation was decent. 73s  
Miro  
OM5RW/Q

---

Hello, Lubos!  
I'm sending the log from today's NZ round. Good conditions overall - I did about 2x3 /Q  
stations.  
Thanks to everyone for the contacts and to you for the evaluation.  
73! Peter, OM5CX

---

Greetings, racers,

terrible conditions today - big leaks. Pleased with the breakthrough connection with  
Zdeněk 1DZD - thanks.  
Thanks to everyone for the connection.

72! Lada OK1LO/Q

---

After you called me in the first leg I didn't hear you anymore Lubos.  
73, Tom

---

Hi Lubos, I send LOG, thank you for evaluation and for organizing the contest! Thanks to  
all stations for joining!  
YOU 73! Jirka, OK1DAR

---

Hello Lubos  
I am sending you the diary from Sunday's race from 12th May 2024  
  
Thank you all for your connection and patience with a beginner

Hi Jirka ok1uky

---

Hey, everybody,  
thanks for the qso and to Lubos for the evaluation. I was worried if the geomag storm would not sum up all the radio signals, like it almost did at OMAC. Fortunately, this did not happen and the ionosphere has calmed down quite a bit.  
73 and ns! next time Lada OK2BLD/Q

---

Hello Lubos,

I am sending attached LOG only for checking, because I had to end my participation in the race in the 16th minute. The pleasure is on my side that I gave away some points. Conditions were worse at the KV for known reasons, I send my regards to all competitors and look forward to next NZ.  
Vilo OM4AY

---

NZ Nr 365: I thought the propagation would be bad after the geomagnetic storms. But it did, it's just strong leaks were evident. Thanks to Miro OM5RW/Q, for the quick breakthrough QSO. Looking forward to NSL next time! Honza OK5MN (OK1MNV)

---

Greetings to the competitors and I am sending my diary from nz365. Thanks to everyone for the connection, to Lubos for the evaluation and I look forward to the next round.  
73! ok2pkt Roman

---

Hello Lubos and the competitors,

back in NZ again today after a long time. RX conditions at the site not great, persistent S9 interference.

I was surprised at the signals the Q stations were generating, you could hardly tell the difference between 5W/100W.

The first leg was brisk, somehow I lost time in the second leg and couldn't make it, hardly anyone responded to CQ.

I was pleased that OK1UKY called, great!

So have a good night and see you all next time. Next week I'm in CQ WPX CW, maybe then.

72 and PZ. Thanks for the contest evaluation.  
SETUP: K3- 100W-DOUBLET

Marek OK1MV

---

Hey. Hey,  
today's NZ as Pile-up. Strong signals, especially. Q stations. In the second part of QSB.  
Nice contest and I enjoyed it quite a bit.  
Constant problem - cluster of stations on one frequency, hard to read the markers and it  
delays. In the confusion I accidentally deleted qso with Lubos FGD.  
Lubos apologies. Thanks for the evaluation, all for the contacts and NSL in the next round.  
73

Tony OK1DOR
